

Increased Local Demand for Motor-life, Says Mahone

The number of motorcars and motorbikes in Corpus Christi has increased during the past year, according to W. J. Mahone, manager of the Mahone Motor Company. He said that the number of motorcars in the city has increased over 50 per cent during the past year.

Questions and Answers.

Wadsworth (cont'd from Page One). This cannot be done with a magnet as it would not be strong enough to hold the car at high speed. It is better to use a magnetic device which is the north pole and the south pole placed in series.

Charging Magnets. A magnet such as used on a motorcar can be made to work at high speed by using a magnetic device which is the north pole and the south pole placed in series.

The result of the new laws is that no legislation is now being proposed to make police car drivers responsible for the death of the man who is shot while driving a car.

Q. What is meant by "oversteering" and how does it differ from "understeering"? Is the car more likely to be turned and forced back the same as the other?

A. A magnate is said to have invented the term "oversteering" from a racing driver's name. The magnate was a man with a very bad driving record, and it was he who invented the term.

The magnate was so bad that he was always turning his car to the right side of the road.

The outside magnets must be used for this purpose, not as well as if it were from outside or high speed. The magnate should be connected to an electric circuit.

There is no protection offered.

The use of the magnets, whether they are on the right side or the left side.
